

**PRAGMA CHIMICA**  
**THE SOLUTION EXISTS**

Since 1996, our company has been operating in the industrial water treatment and environmental ecology sector. We work all over Italy and abroad, **providing experience, state-of-the-art technologies, products and solutions calibrated** to respond to every specific need or problem of individuals and companies.

A phrase that our founding partner Carlo Masiero had made his own reads: "The land is not an inheritance received from our fathers, but a loan to be repaid to our children." This shows our great attention to **environmental conservation**, which has always been one of Pragma Chimica's main objectives.

To ensure a **comprehensive service to the customer**, Pragma Chimica offers analytical technical support for continuously monitoring the status of water treatment systems. Through our in-house laboratory, we are able to perform checks on specific parameters for wastewater control and chemical-physical and biological analyses to verify the proper operation of the plants themselves.

We constantly invest in the **professional training** of our technicians and collaborate with leading companies in the additive and water treatment plants market to provide **timely and effective solutions**.

## What characterises our work

We have made customer service our strength and our business card: we commit ourselves every day so that those who choose to rely on Pragma Chimica can count on a **trusted partner** in any circumstance. Pragma Chimica's ability to provide wide-ranging consultancy, the careful monitoring to which the treated plants are subjected, the promptness in interventions and deliveries, and the respect for all bureaucratic and legislative aspects turn into an important competitive advantage for our clients.

What characterises our work is the combination of a **global vision and attention to detail**, seeking the best solutions that can help solve and prevent critical issues, reduce waste, optimize the production process and be (truly) sustainable.

With Pragma Chimica, the solution exists.

# Why Pragma Chimica

The continuous evolution of legislation in the field of water treatment, and the complexity of disposal processes and remediation operations, can put even the most structured companies in difficulty. **Providing answers and offering solutions** in these areas is our mission, which we have been fulfilling with passion and dedication for almost thirty years, prioritizing actions over words.

Our headquarters are in Arzignano (VI), at the heart of Italy's most important tanning district and among the largest in Europe. This strategic location has allowed us to deal with a wide range of environmental issues, accumulating **valuable know-how** and the necessary skills to meet the diverse needs of individuals and companies.

Having **reliable partners** to turn to is crucial for any company, and we aim to be your trusted one. The service provided by our specialised technicians ensures **punctuality, professionalism, safety, and swift intervention**.

# WATER

**Taking care of water is a fundamental necessity for any company that wants to achieve maximum performance from its plants while operating responsibly toward the environment. In this regard, we offer our technicians' expertise in industrial water purification and chemical conditioning to provide efficient solutions that make water suitable for every application.**

In this field, we address and solve the various problems related to industrial and civil wastewater, primary and process water, by designing, building and managing technologically advanced plants and systems in compliance with current regulations.

## Our activities

- Water treatment for
  - cooling circuits
  - closed circuits (heating and cooling)
  - steam generators
  - glycol circuits
- PFAS removal from primary and wastewater
- Legionella prevention and control
- Chemical washing
- Design and production of membrane plants (RO, UF, MBR)
- Treatment and purification of wastewater
- Water purification and first rain systems
- Environmental sanitization

## ENVIRONMENTAL SERVICES

**Every action carried out by humans in industrial and civil activities involves the production of waste, slag, and polluting agents which management must be careful and prudent to minimise environmental impact.**

The complexity of disposal processes, the difficulty of decontamination operations, and the continuous evolution of legislation make it necessary to have reliable partners to turn to, who know how to deal with the specific environmental problem of a company, while operating in compliance with the regulations in force. Meeting these needs is the purpose for which we operate, providing experience, expertise, and solutions for a wide range of environmental services.

### Our activities

- Intermediaries for the management, transport and disposal of waste (hazardous and non-hazardous)
- Environmental emergency response and emergency safety measures
- Environmental characterisation
- Environmental remediation
- Video inspections
- Sludge dewatering
- Tank reclamation
- Cleaning of industrial tanks

# INNOVATION TECHNOLOGY

By nature, we pay attention to technological innovations and our research and development department is always working to find the best solutions to meet companies' needs in a timely and effective manner.

Our experience and the integration of our two historical fields of action (Water and Environment) mean that we can count on a single trusted partner for two strategic sectors in the industry that require specific knowledge and skills, a global vision and attention to detail. We take of the opportunities offered by new technologies and the 5.0 transition.

## Our services

- Primary and technological water treatment
- On-going cleaning of closed circuits  
Remote monitoring of water treatment plants
- Global service for industrial plant management
- Technical and legislative consultancy for correct water treatment
- Technical and legislative support for the management of industrial steam generators and pressure equipment
- Solutions for energy and water saving in existing plants
- Consultancy on safety at work, environmental practices and obtaining quality certifications, in partnership with e\_labo
